Ahead of the curve...

Accord 15 - Contour Translucent

Contour Translucent is one of the boldest and most innovative concepts our industry has ever seen! A gently sloping frame creates the illusion of an arc-shaped face, for a refreshing and modern look.

The translucency of the contour frame material gives these signs an ethereal quality that is unavailable anywhere else on the market! Express yourself through cutting-edge designs using four distinctive colors and all the basic components of the Accord 15 family.

Accord 15 - Aluminum Contour Side Track

Like its cousin above, the Contour Side Track features a smooth, curved shape that signals a complete departure from other sign frames available on the market.

The extruded aluminum profile is proportioned for use with larger elements of a sign system such as directionals, directories, and room/suite id's. In keeping with all Accord 15 side track profiles, Contour is compatible with an abundance of clever decorative options such as the perforated metal pattern shown here. Contour Side Track's unique, wing-like shape is ideal for creating one-of-a-kind designs, yet incorporates the broad range of standard Accord 15 components.
